

“ Enhancing performance,
creating precision ”

DM2F

Metalworking solutions

Where we need
efficiency & daring

We are the metalworkers

HISTORY

The **DM2F Group** was founded in 2001, by managers from world leading companies.

They set out to create a human scale business providing a high level of quality and service in its core activity – metalworking.

Pursuing this mission, we have continued to hone our skills to provide a complete range of services – cutting, pressing, precision sheet metal work and welding, as well as producing our own products, designed by us.

VALUES

The **DM2F Group** has always established an open partnership with each of its customers and suppliers, based on constructive listening, but respect is the core value than underlies every decision and every action.

Respect for our customers, our suppliers, our staff and our environment means respecting our work, and our relationships built around our work, every day. It is the quality of these relationships that enable us to offer inventive, effective and reliable products and services. In an era when everything is changing, we are proud of our long-term relationships with our customers.

The **DM2F Group** is still a human scale business with **three complementary subsidiaries** to offer a complete range of metalworking services.

Since **2001**

3 sites

120 staff

A complete range of machine tools

12 automatic sheet metal cutting machines from 50 to 250 T

35 forming presses from 6 to 200 T

3 hydraulic forming presses from 60 to 160 T

1 soft sheet cutting machine

2 combined punching and shearing machines with loader

4 130 T, 3 m bending presses

7 spot welders

3 automatic welders (aluminium and steel)

DM2F: The metalworkers

Cutting, pressing, specialist sheet metal work and welding –
design and assembly

DM2F specializes in metalworking
as we have demonstrated every day for more than 50 years.

When we need
durability & reliability

We know metalworking

Automotive and railway industries

Fitting, drilling, etc. – our leading edge skills, drawn from **Reydelet-Dumoulin**, have supported the automotive and railway industries form more than 50 years. From design through fabrication to delivery, not forgetting stock control, **we provide efficient solution to each requirement for a very wide range of components.**

Transport

Simplify, optimize – our experience in transport systems means that we can offer practical, tough solutions that can withstand high loads over long periods. **Our STOCKEO aluminium pallets are the leaders for ergonomics, reliability and quality of construction.**

Engineering industries

Design, cutting out, pressing, sheet metalwork, electrical discharge machining – major players in the health, nuclear and electricity generation have relied on us to help with key projects and **to design or make components subject to severe constraints or requirements.**

Appliances

Sheet metalwork and cutting/pressing – we also strive to make life easier and more pleasant, making essential components for the hospitality industry, housings for white goods, kitchen accessories, air conditioning. **Household appliances, clothed in, and built on, components made using our complementary skills, are both attractive and functional, giving them the edge they need.**

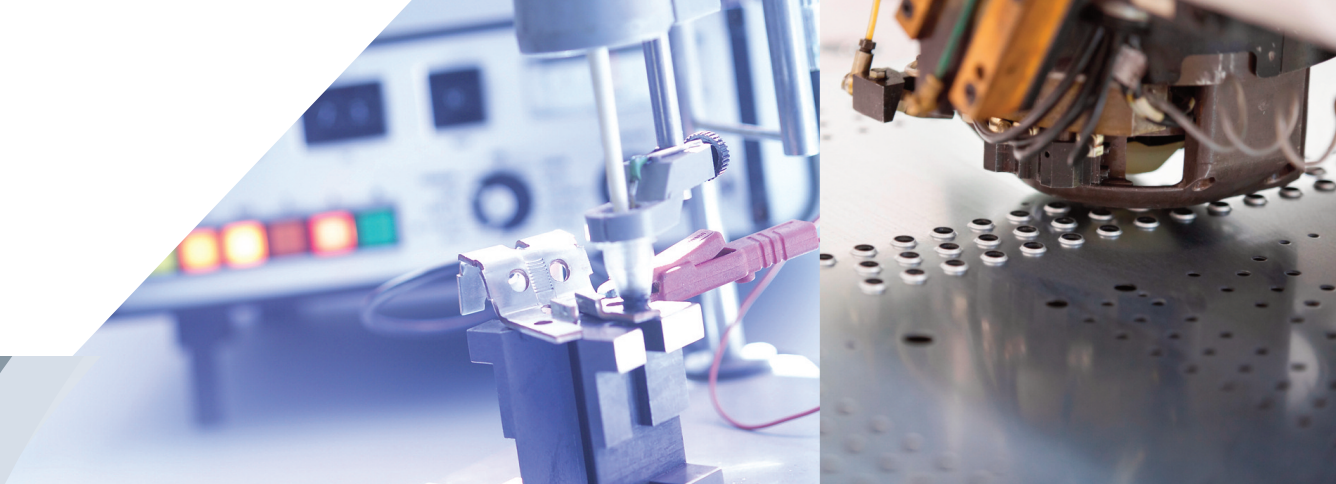

Precision engineering

Carbon steel, alloy steel and aluminium sheet and sections – our sheet metalworking and welding skills cover a wide range of materials and **we can fabricate complex assemblies to exceptionally tight tolerances.**

Decorative items

Carbon steel, stainless steel, copper, aluminium, brass – engineering becomes an art where we make parts, in small and medium production runs, for decorative objects and furniture that are as functional as they are attractive. **We can adapt our design and surface treatments to create special parts to meet all the challenges of this sector.**

Because we need
ingenuity & flexibility

We are reinventing metalworking

Research and Development

We use all our experience for preliminary studies, design, prototyping, advice on selecting materials and recommending the best technological or cost-effective solutions for every inquiry and every contract.

Production lines

We manage our own tooling and can propose specific solutions for each individual case. We can provide appropriate solutions for the most commonplace and the most unusual requirements with very competitive price/quality and price/performance.

Processes

The production engineering of our processes and the development of new working methods guarantees both the performance of the end products and on-time delivery for small and large-scale production and for surface treatment.

Special equipment

Equipment for testing and quality control. Our company culture is based on a demanding quality strategy with three objectives: continuous improvement of our processes and performance, meeting and anticipating our customers' requirements and customer satisfaction.
